

TFL Service for Cradlepoint

Using Cradlepoint Routers with Our TFL Service

Use Cradlepoint IBR900 and IBR1700 routers to send GPS tracking data to our TFL Portal. The TFL service allows real-time tracking of the Cradlepoint mobile routers, allowing full functionality for geofencing and alerts as well as reporting and usage Analytics. Setup of the router is super quick and easy using the Cradlepoint Netcloud service. The service is available with or without a cellular data plan, so please inquire about these options.
